

PROVIDENCE PARK HOSPITAL

Coming Soon to THE health campus near you!

Cardiovascular Care. The hospital's cardiac center will provide advanced heart and vascular care, including heart catheterizations, pacemaker and cardioverter defibrillator implantations, diagnostic electrophysiologic studies, and a comprehensive cardiac rehabilitation program. Most importantly, the hospital will be part of the St. John Health Cardiovascular Network, aligning itself with the open-heart surgery program of Providence (Southfield), a Top 100 heart hospital seven years running and a recognized Blue Cross-Blue Shield Cardiac Center of Excellence.

Cancer Care. Building upon the innovative therapies and advanced technologies available at the Assarian Cancer Center (a joint venture between Providence and the University of Michigan), the hospital will be considered a leading resource in cancer treatment.

Emergency Department: Designed to function as a fully equipped tertiary center that is staffed to care for serious traumas and serve as a regional resource.

Imaging Services: Our preeminent centralized imaging center will feature state-of-the-art imaging technologies – advanced MRI, CT, PET, nuclear medicine, SPECT/CT, mammography and ultrasound – in a fully integrated digital imaging service.

Neurosciences. The upcoming Neurosciences Institute at Providence Park will include teams of highly accomplished neurosurgeons, neurologists, spine specialists, craniofacial and reconstructive surgeons, specialists in pain management, rehabilitation, and pediatric neurologists. The nationally-renowned physicians of The Michigan Ear Institute; Michigan Head and Spine Institute; Michigan Spine and Brain Surgeons; and Associates in Neurology will offer their comprehensive leading-edge services. The Institute will include a highly specialized, state-

of-the-art Surgical Skills Lab, and Providence Park Hospital will have dedicated operating rooms for neurosciences adjacent to an intra-operative MRI suite making it the first of its kind in the region.

Orthopedics. The new Novi Orthopedic Center at Providence Park is a \$22 million, 65,000-square-foot center that will be a one-of-a-kind facility. Within the center, patients will have access to a wide range of physician specialists, including orthopedic surgeons, podiatrists, pain management specialists, and primary care physicians. The Center will also house the Novi Bone & Joint Center that will provide for outpatient surgery. The facility will have services like physical therapy, orthotics, and prosthetics (items like braces and splints), thus providing one-stop musculoskeletal care.

Pediatrics: A 10-bed pediatric unit and dedicated pediatric emergency service will be located in a highly secure area near the Emergency Department.

Women's and Infants' Health: The entire third floor of Providence Park Hospital is a dedicated Women's and Infants' Health Center that will provide the most comprehensive health care for women and newborns. A Family Birthing Center will include 27 Labor/Delivery/Recovery/Postpartum (LDRP) rooms with sleeping areas for spouses and families; a well-baby nursery; Special Care Nursery (SCN); gynecology unit; and antepartum and observation rooms.

The Total Campus Experience

New hospital to be focal point for health

By Rob Casalou, President

All of us at St. John Health are excited to bring you a new concept in health care – Providence Park Hospital, the hospital of the future, today. In planning our new health destination, we looked at innovative approaches to care all across the country, and we selected the very best ones to come together in this new hospital. We took members of our planning teams to hospitals, conferences and customer-focused organizations, such as the Disney Institute.

Thanks to all of the ideas we brought back and distilled into our plan for the hospital, our patients will benefit from the latest in health care thinking combined with the best of the hospitality industry.

Clinically and technologically speaking, we will provide the latest thinking in patient care. Most of our inpatient rooms will be “acuity-adaptable,” meaning that patients can remain in the same room throughout their hospital experience, even as their condition changes, thanks to a higher level of technology and equipment and specially trained staff.

When it comes to customer service, an idea we adopted from Disney is the offstage/onstage concept. In the new hospital we use double corridors so that distracting, health care environment activities, such as transporting supplies and equipment, occur “offstage,” out of view of visitors. Patients and visitors will see only a quiet, organized, healing ambience.

Our campus is more than a state-of-the-art hospital; we want it to be a total health destination. In addition to the services based in the hospital, the campus features a new Orthopedic Center with an ambulatory surgical center, a medical office building and

Neurosciences Institute with a large surgical and procedural skills education center. Also, 1.6 miles of outdoor fitness paths wind through the scenic woods and wetlands of the campus allowing visitors the opportunity to enjoy the serenity.

We will be a full-service destination for patients and families. A Staybridge Suites extended-stay hotel is also on campus for family members who need to be near hospitalized loved ones. Health-related retail businesses, such as a fitness center, yoga studio and specialty grocer, will also serve their needs and be a resource for nearby communities.

The new Providence Park Hospital and campus is very conveniently located directly off of I-96 and Beck Road (exit 160). If you are looking for a new doctor, we can help you find one who meets your needs. **St. John Health Connect** can make appointments and referrals for your whole family. Just call **1-888-440-7325**, 8 am to 5 pm Monday thru Friday. We hope you share our enthusiasm as this exciting new concept in health care comes to life.
